

TABLE OF CONTENTS

1. ONE-DIMENSIONAL MODEL PROBLEMS	1
1.1 INTRODUCTION -----	1
1.2 HEAT CONDUCTION -----	1
1.2.1 Governing Equations.....	1
1.2.2 Boundary Conditions	6
1.2.3 The Addition of Convection.....	10
1.2.4 The Addition of Advection.....	11
1.3 STRESS ANALYSIS FOR A BAR -----	13
1.3.1 Governing Equations for an Elastic Bar.....	13
1.3.2 Solutions to the Static Problem	18
1.3.3 Solutions for Nonsmooth Data.....	21
1.3.4 The Embedded Bar.....	24
1.4 STRESS ANALYSIS FOR A BEAM -----	26
1.4.1 Euler-Bernoulli Theory	26
1.4.2 Exact Solutions to the Static Problem	32
1.4.3 Timoshenko Theory.....	35
1.5 PROBLEMS WITH AXIAL AND SPHERICAL SYMMETRY -----	37
1.5.1 Cylindrical and Spherical Coordinates	37
1.5.2 Heat Conduction.....	38
1.5.3 Stress Analysis	39
1.6 RELATED TOPICS-----	40
1.6.1 General Form of Differential Equations	40
1.6.2 General Method for Treating Discontinuities.....	41
1.6.3 Self Adjointness.....	42
1.6.4 Energy Formulation.....	44
1.7 CONCLUDING REMARKS-----	46
1.8 EXERCISES-----	47
 2. TIME-DEPENDENT PROBLEMS IN ONE DIMENSION	 49
2.1 INTRODUCTION -----	49
2.2 TRANSIENT HEAT CONDUCTION-----	49
2.2.1 Formulation.....	49
2.2.2 Analytical Solution.....	50
2.2.3 Procedure for Obtaining Series Solutions.....	51
2.2.4 Series Solutions.....	55
2.3 WAVE MOTION IN A BAR -----	60
2.3.1 Formulation.....	60
2.3.2 Wave Solutions.....	60
2.3.3 Procedure for Obtaining Series Solutions.....	68
2.3.4 An Example of a Series Solution	72
2.3.5 Approximate Solutions.....	75
2.4 TRANSIENT MOTION OF A BEAM-----	78
2.4.1 Formulation.....	78
2.4.2 Procedure for Obtaining Series Solutions.....	78
2.4.3 An Example Solution.....	83
2.5 CONCLUDING REMARKS-----	87
2.6 EXERCISES-----	87

3. LINEAR ALGEBRA	89
3.1 INTRODUCTION	89
3.2. VECTORS.....	89
3.2.1 Notation.....	89
3.2.2 Vector Spaces.....	90
3.2.3 Basis for Vector Spaces.....	91
3.3 MATRICES.....	94
3.3.1 Notation.....	94
3.3.2 Matrix Multiplication.....	95
3.3.3 Derivative of a Matrix	96
3.3.4 Transpose of the Product Matrices.....	96
3.3.5 Partitioned Matrices.....	96
3.3.6 Outer Product of Matrices.....	98
3.3.7 Special Matrices	98
3.3.8 Applications of Vector Spaces to Matrices.....	98
3.4 SQUARE MATRICES.....	100
3.4.1 Notation.....	100
3.4.2 The Identity Matrix.....	100
3.4.3 Orthogonal Matrices.....	101
3.4.4 Positive Definite Matrices.....	104
3.4.5 Congruence and Similarity.....	104
3.4.6 Elementary Matrices.....	104
3.4.7 Determinants.....	106
3.5 GAUSSIAN ELIMINATION.....	111
3.5.1 The Algebraic Problem	111
3.5.2 Cramer's Rule.....	111
3.5.3 LU Decomposition.....	111
3.5.4 Cholesky Decomposition.....	117
3.5.5 QR Decomposition	119
3.6 MISCELLANEOUS TOPICS	121
3.6.1 Contravariant and Covariant Bases.....	121
3.6.2 Sherman-Morrison Formula.....	122
3.6.3 Sherman-Morrison-Woodbury Formula.....	123
3.7 CONCLUDING REMARKS.....	124
3.8 EXERCISES.....	124

4.1 INTRODUCTION	127
4.2 STANDARD EIGENPROBLEM FOR SYMMETRIC MATRICES--	127
4.2.1 Basic Definitions.....	127
4.2.2 Modal Matrices and Spectral Decomposition....	131
4.2.3 Eigenvector Basis	133
4.2.4 Positive Definiteness	134
4.2.5 Similarity	134
4.2.6 Power of a Matrix.....	135
4.2.7 Orthogonal Projections	136
4.2.8 The Cayley-Hamilton Theorem	138
4.2.9 Rayleigh Quotient.....	139
4.2.10 Eigenvalue Separation Property.....	142
4.3 STANDARD EIGENPROBLEM FOR UNSYMMETRIC MATRICES-----	142
4.3.1 Properties of the Eigensystem	142
4.3.2 Gerschgorin's Theorem	144
4.4 GENERAL EIGENPROBLEM	146
4.4.1 Basic Relationships for Symmetric Matrices....	146
4.4.2 Relationships between General and Standard Eigenproblems.....	147
4.5 NORMS-----	149
4.5.1 Vector Norms	149
4.5.2 Matrix Norms.....	150
4.5.3 Weighted Norms.....	151
4.5.4 Scaled P-Norms	151
4.6 CONDITION OF LINEAR EQUATIONS-----	152
4.7 DECOMPOSITIONS-----	153
4.7.1 Singular Value Decomposition.....	153
4.7.2 Polar Decomposition.....	155
4.8 MODAL METHOD FOR SOLVING THE ALGEBRAIC PROBLEM-----	155
4.8.1 The Complete Modal Method.....	155
4.8.2 The Approximate Modal Method.....	156
4.9 ITERATIVE METHODS FOR SOLVING THE ALGEBRAIC PROBLEM-----	158
4.10 ITERATIVE METHODS FOR OBTAINING EIGENPAIRS-----	162
4.10.1 Introductory Comments.....	162
4.10.2 Backward or Inverse Iteration.....	163
4.10.3 Forward Iteration	164
4.10.4 Gram-Schmidt Method for Other Eigenpairs ...	165
4.11 EXAMPLE PROBLEMS-----	166
4.12 CONCLUDING REMARKS-----	173
4.13 EXERCISES	173

5. THE FINITE DIFFERENCE METHOD	175
5.1 INTRODUCTION -----	175
5.2 STABILITY -----	178
5.3 ERROR-----	179
5.4 FINITE DIFFERENCE ALGORITHMS FOR ODES WITH CONSTANT COEFFICIENTS-----	184
5.4.1 A First-Order Differential Equation	184
5.4.2 A Second-Order Differential Equation.....	189
5.4.3 A More Complex Model Problem.....	192
5.5 BOUNDARY CONDITIONS-----	193
5.6 THE ADVECTION-DIFFUSION EQUATION-----	197
5.7 VARIABLE COEFFICIENTS-----	200
5.8 NUMERICAL DETERMINATION OF RATE OF CONVERGENCE	205
5.9 LAX'S EQUIVALENCE THEOREM-----	207
5.10 USE OF A SCALED NORM-----	209
5.11 CONCLUDING REMARKS-----	211
5.12 EXERCISES -----	212
 6. THE SYMMETRIC WEAK FORMULATION AND GALERKIN'S METHOD	 213
6.1 INTRODUCTION -----	213
6.2 SYMMETRIC WEAK FORM -----	214
6.3 BOUNDARY CONDITIONS-----	217
6.4 GALERKIN APPROXIMATIONS -----	219
6.5 DETERMINATION OF GALERKIN APPROXIMATIONS-----	221
6.6 BOUNDARY CONDITIONS FOR THE GALERKIN PROCEDURE	223
6.6.1 Neumann Boundary Conditions	223
6.6.2 Homogeneous Dirichlet Problem.....	223
6.6.3 Inhomogeneous Dirichlet Problem.....	224
6.6.4 Mixed Boundary Conditions	226
6.7 NODAL BASIS FUNCTIONS-----	228
6.8 LAGRANGE POLYNOMIALS-----	231
6.9 GLOBAL AND LOCAL SUPPORT-----	231
6.10 RAYLEIGH-RITZ APPROXIMATIONS-----	232
6.11 CONCLUDING REMARKS-----	233
6.12 EXERCISES -----	234
 7. THE FINITE ELEMENT METHOD	 237
7.1 INTRODUCTION -----	237
7.2 A TWO-NODE ELEMENT-----	237
7.3 GALERKIN MATRICES FOR THE TWO-NODE ELEMENT -----	240
7.4 ELEMENT MATRICES FOR PIECEWISE CONSTANT FORCE AND STIFFNESS-----	244
7.5 CONTRIBUTIONS OF POINT FORCES TO THE GLOBAL FORCE -----	246
7.6 AN ALGORITHM FOR GLOBAL STIFFNESS AND FORCE MATRICES-----	247
7.7 KINEMATIC BOUNDARY CONDITIONS-----	252

7.7.1 Deleting Rows and Columns.....	252
7.7.2 Adjusting Rows and Columns.....	254
7.7.3 The Penalty Method.....	255
7.8 INTERPRETATION OF THE APPROXIMATE SOLUTION-----	257
7.9 ONE-ELEMENT SOLUTIONS-----	258
7.10 ERROR ANALYSIS-----	264
7.10.1 Norm of a Function	264
7.10.2 Error	265
7.10.3 Error Bounds	267
7.10.4 The Need for Complete Polynomials.....	271
7.10.5 Accuracy of the Force Vector and Element Stiffness Matrix	274
7.11 A MORE GENERAL ERROR ANALYSIS-----	274
7.12 THE THREE-NODE ELEMENT-----	278
7.13 EIGENVALUES OF STIFFNESS MATRICES-----	281
7.14 BOUNDS ON EIGENVALUES-----	284
7.15 STIFFNESS MATRICES FOR THE GENERAL PROBLEM-----	286
7.16 CONCLUDING REMARKS-----	287
7.17 EXERCISES -----	289

8. TIME INTEGRATION OF A SINGLE-DEGREE-OF-FREEDOM SYSTEM 291

8.1 INTRODUCTION -----	291
8.2 SINGLE-DEGREE-OF-FREEDOM SYSTEM-----	291
8.3 THE GENERAL TRAPEZOIDAL RULE-----	293
8.4 STABILITY ANALYSIS OF THE GENERAL TRAPEZOIDAL RULE -----	295
8.5 ERROR AND CONVERGENCE -----	298
8.6 LAX'S EQUIVALENCE THEOREM-----	301
8.7 DERIVATION BASED ON LOCAL TRUNCATION ERROR-----	302
8.8 DIRECT PLOTS OF ERROR-----	304
8.9 CONCLUDING REMARKS-----	305
8.10 EXERCISES -----	306

9. TRANSIENT HEAT CONDUCTION 307

9.1 INTRODUCTION -----	307
9.2 GOVERNING EQUATIONS-----	307
9.3 THE GALERKIN FORMULATION FOR NODAL BASIS FUNCTIONS -----	309
9.4 MATRICES USING FINITE ELEMENTS-----	309
9.5 TIME INTEGRATION OF THE GALERKIN EQUATIONS-----	311
9.6 IMPLICIT AND EXPLICIT TIME INTEGRATION-----	314
9.7 DIRECT STABILITY ANALYSIS -----	317
9.8 STABILITY ANALYSIS USING MATRIX THEORY-----	320
9.9 CONVERGENCE-----	323
9.10 CONCLUDING REMARKS-----	324
9.11 EXERCISES -----	324

**10. TIME INTEGRATION OF A SINGLE-DEGREE-OF-FREEDOM
SECOND ORDER SYSTEM 327**

10.1 INTRODUCTION-----	327
10.2 SINGLE-DEGREE-OF-FREEDOM SYSTEM-----	327
10.3 GENERAL TRAPEZOIDAL RULE-----	329
10.4 LOCAL TRUNCATION ERROR-----	331
10.5 STABILITY ANALYSIS, DISSIPATION AND DISPERSION --	335
10.5.1 Physically Overdamped System	335
10.5.2 Physically Underdamped System.....	337
10.5.3 Physically Undamped System.....	340
10.6 RELATED TOPICS-----	346
10.6.1 Amplification Matrix.....	346
10.6.2 Requirements for an Energy Conserving Algorithm	347
10.6.3 A Multi-Step Algorithm.....	348
10.7 NEWMARK INTEGRATOR-----	349
10.8 CONCLUDING REMARKS-----	352
10.9 EXERCISES -----	354

11. TRANSIENT MOTION OF A BAR 355

11.1 INTRODUCTION-----	355
11.2 GOVERNING EQUATIONS-----	355
11.3 THE GALERKIN FORMULATION FOR NODAL BASIS FUNCTIONS-----	357
11.4 GALERKIN MATRICES USING FINITE ELEMENTS -----	358
11.5 TIME INTEGRATION OF THE GALERKIN EQUATIONS-----	359
11.6 STABILITY ANALYSIS FOR SYSTEM OF EQUATIONS-----	368
11.7 MATRIX APPROACH TO ANALYSE STABILITY -----	372
11.8 CONCLUDING REMARKS-----	375
11.9 EXERCISES -----	376

12. STATIC AND DYNAMIC RESPONSE OF BEAMS 377

12.1 INTRODUCTION-----	377
12.2 WEAK FORM OF THE EULER-BERNOULLI EQUATION-----	377
12.3 GALERKIN FORMULATION FOR NODAL BASIS FUNCTIONS	379
12.4 DETAILS OF THE FINITE ELEMENT FORMULATION-----	383
12.4.1 Element Mass Matrices.....	383
12.4.2 Element Stiffness Matrices.....	384
12.4.3 Element Force Vectors	384
12.4.4 Boundary Conditions.....	385
12.4.5 Assembling the Global Force Vector.....	386
12.4.6 Assembling the Global Stiffness Matrix.....	388
12.4.7 Dynamic Problems.....	389
12.5 FINITE ELEMENT FORMULATION FOR THE MINDLIN THEORY	389
12.6 CONCLUDING REMARKS-----	392
12.7 EXERCISES -----	392

13. THE NODAL FORCE OR MIXED METHOD	395
13.1 INTRODUCTION-----	395
13.2 GOVERNING EQUATIONS-----	395
13.3 GALERKIN FORMULATION USING FINITE ELEMENTS-----	396
13.4 COMPUTATIONAL ALGORITHM-----	398
13.5 CONCLUDING REMARKS-----	399
13.6 EXERCISES -----	400
 14. OTHER COORDINATE SYSTEMS	 401
14.1 INTRODUCTION-----	401
14.2 AXIALLY SYMMETRIC TRANSIENT HEAT CONDUCTION----	401
14.3 FINITE ELEMENT MATRICES FOR AXIALLY SYMMETRIC HEAT CONDUCTION-----	403
14.4 TRANSIENT MOTION IN THE RADIAL DIRECTION -----	406
14.5 CONCLUDING REMARKS-----	411
14.6 EXERCISES -----	412
 15. MULTIPOINT CONSTRAINTS	 413
15.1 INTRODUCTION-----	413
15.2 EXISTING APPROACHES-----	414
15.2.1 Notation.....	414
15.2.2 Direct Elimination.....	414
15.2.3 Least Squares.....	415
15.2.4 Penalty Method	417
15.2.5 Lagrange Multipliers	418
15.2.6 Orthogonal Projections.....	418
15.2.7 Sequential Applications of Constraints.....	419
15.3 PROCEDURE SUGGESTED BY THE WEAK FORMULATION-419	
15.3.1 A Single Constraint.....	419
15.3.2 Multiple Constraints.....	423
15.3.3 Maintaining Symmetry	424
15.3.4 General Algorithm	
15.4 A SIMPLE EXAMPLE-----	426
15.5 CONCLUDING REMARKS-----	427
15.6 EXERCISES -----	427
 16. ADVANCED CONCEPTS ASSOCIATED WITH HIGHER ORDER ELEMENTS	 429
16.1 INTRODUCTION-----	429
16.2 UNDERINTEGRATION WITH THE STANDARD THREE-NODE ELEMENT-----	429
16.3 ARBITRARY LOCATION OF SECOND NODE-----	433
16.4 IMPLICATIONS ASSOCIATED WITH A MASTER ELEMENT -436	
16.5 CONCLUDING REMARKS-----	441
16.6 EXERCISES -----	442
 17. CONCLUSION	 443

APPENDIX	444
A.1 FUNDAMENTAL THEOREM OF CONTINUUM MECHANICS ----	433
A.2 FUNDAMENTAL LEMMA OF THE CALCULUS OF VARIATIONS	433
A.3 TAYLOR SERIES-----	434
A.4 NUMERICAL QUADRATURE -----	434
A.5 INTEGRATION BY PARTS -----	436
A.6 ONE-DIMENSIONAL DIVERGENCE THEOREM-----	436
A.7 GENERALIZED FUNCTIONS-----	438
A.8 CLASSIFICATION OF FUNCTIONS-----	441
REFERENCES	443
